

Delivering True Gigabit Connectivity with 802.11ax WiFi in 2019

The next big step in WiFi is the arrival of 802.11AX in 2019. This new standard delivers higher bandwidth (more than 1Gbps), better quality in dense environments, and lower latency. In this session, operators will learn about the benefits of this technology to their business. Operators will also get insight into the ramp of this technology including timelines for WiFi Alliance certification, when PCs and mobile devices will include the technology, and when operators should realistically be deploying AX in their routers and gateway. And lastly, Lance will talk about AX, 5G, and 10G Fiber/DOCSIS and how these standards interrelate and complement each other.
