

LoRaWAN – The Key To Unlocking Enormous Potential Of IoT Solutions

LoRaWAN is a Low Power Wide Area Network (LPWAN) specification intended for wireless battery-operated sensors and end devices. It targets key requirements of Internet of Things such as long range, secure bi-directional communication, mobility and localization services. In this session, Jeff McInnis will speak to the growing demand for LoRaWAN solutions in gateways and software for the industrial, enterprise, and service provider markets.
